Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 1761

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on October 7, 2004 has been entered.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 6 is rejected under 35 U.S.C. 102(e) as being anticipated by Muromachi et al (Example 6).

Muromachi et al discloses an oyster meat extract having a zinc content of 0.2% (2g/Kg), which is within applicant's claimed range. The zinc inherently combines with peptides of the oyster meat extract.

5. Claims 7, 8 and 10-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Muromachi et al.

Taurine, glycogen, manganese and magnesium are components which are naturally present in oyster extract. Finding the optimum amount of each of these components (claims 8 and 12) and the optimum zinc percent present in the oyster extract (claims 10-13) would require nothing more than routine experimentation by one reasonably skilled in this art.

6. Applicant's arguments filed October 7, 2004 and the 132 declaration dated August 11, 2004 have been fully considered but they are not persuasive. The 132 declaration is insufficient to overcome the 35 USC102 rejection of claim 6. With regard to the remaining claims only claims 10-13 recite a zinc percent not disclosed by Muromachi et al. However, it is not clear from the 132 declaration that an oyster extract having a zinc concentration as claimed, viz. 6-14% (claims 10-13), was used in Table 2 of the declaration. Further, the declaration provides inconsistent results in that the ZRP provides a lower zinc concentration in the muscle of the rats than is provided by the zinc carbonate hydroxide. What is zinc carbonate hydroxide How does this compare with the zinc concentration used in Muromachi et al?

7. Claim 9 stands withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on submitted March 22, 2004.
